INVENTORS

EXTRACURRICULAR PROGRAMME **2nd CYCLE**

2025/26

INVENTORES

***FROM SMALL INVENTORS
TO SCIENCE SUPERHEROES!***

This is a project-based programme, focused on **STEAM** areas.

We are launching a new challenge

A fully renewed programme for 2nd cycle students, designed for those who have already built, already explored... and want to go further.

This new path is structured into themed missions, with hands-on and playful lessons that deepen concepts of science, engineering, communication, and technology. In each session, students build, test, play and analyse, developing critical thinking, autonomy, and scientific mindset.

TOTAL CONTROL MISSION

In this mission, students build, customise, and drive their own cars. From simple models to advanced remote-controlled vehicles, they explore engineering and remote-control concepts through creativity, teamwork, and exciting track challenges.

FREQUENCY MISSION

Students become young engineers and communicators! From assembling a radio to creating and broadcasting shows, the mission leads them to explore the world of sound waves and FM communication, with creativity, collaboration and lots of fun!

This is the ideal programme to continue the Inventors adventure with more complexity, more purpose, and greater impact.

GREEN MISSION

With solar cars, wind turbines, and even saltwater energy, students explore solutions for a more sustainable planet. They will build, play and reflect on how science can help protect the environment... With creativity and renewable energy!

EXTRACURRICULAR PROGRAMME 2nd Cycle

2025 / 26

HANDS-ON ACTIVITIES AND PROJECTS THAT INSPIRE THE INVENTORS OF THE WORLD

This programme is not presented in chronological order and may be subject to changes or adjustments throughout the school year.
